CTION 7: HANDLING AND STORAGE	
7.1 Precautions for safe handling	
Precautions for safe handling:	Avoid build-up of dust. Remove possible causes of ignition - do not smoke. Avoid contact with eyes or skin. Eating, drinking, smoking, well as food-storage, is prohibited in work-room.
Personal protection:	General hygiene measures for the handling of chemicals are applicable. Wash hands before breaks and at end of work.
Technical protective measures:	Ensure good ventilation. Avoid build-up of dust. If applicable, suction measures at the workstation or on the processing machine necessary. Take measures against electrostatic charging, if necessary.
Handling:	Handle and open container with care. Observe directions on label and instructions for use. Use working methods according to operating instructions. Keep away from food, drinks, and animal feeding stuffs. Remove contaminated clothing and protective equipment before entering areas in which food is consumed.
7.2 Conditions for safe storage, including	any incompatibilities
Storage:	Keep out of access to unauthorised individuals. Store product close and only in original packing. Not to be stored in gangways or stair wells.
Conditions for safe storage, including a incompatibilities:	Store in a well-ventilated place. Store in a dry place. Store cool.
Storage – away from:	Do not store with oxidizing agents. Protect from direct sunlight and warming.

Hand protection:	Chemical resistant protective gloves (EN 374). Recommended: Protective nitrile gloves (EN 374). Minimum layer thickness in mm: 0,43. Permeation time (penetration time) in minutes: 480.
	Protective hand cream recommended. The breakthrough times determined in accordance with EN 16523-1 were not obtained under practical conditions. The recommended maximum wearing time is 50% of breakthrough time.
	Final selection of glove material must be made taking the breakthrough times, permeation rates and degradation into account. Selection of a suitable glove depends not only on the material but also on other quality characteristics and varies from manufacturer to manufacturer. In the case of mixtures, the resistance of glove materials cannot be predicted and must therefore be tested before use. The exact breakthrough time of the glove material can be requested from the protective glove manufacturer and must be observed.
Respiratory protection:	Normally not necessary. On dust formation: If applicable, filter P2 (EN 143), code colour white. Observe wearing time limitations for respiratory protection equipment.
Thermal hazards:	Not determined.
Environmental exposure control
